1926 Price List of
J. V. Bailey's
Hardy Nursery Stock

A Winter Scene of Evergreens

Dayton's Bluff Station
Saint Paul, Minnesota
St. Paul Telephone La Salle 98421
Nursery Located Near Highway No. 3 at City Limits
List of hardy nursery stock, with descriptions and prices for spring delivery. These quotations are f. o. b. St. Paul, or at nursery, except where otherwise stated.

FREE OF CHARGE

Because of the many requests for planting instructions I am going to furnish free of charge a booklet of planting instructions with each order.

STRAWBERRIES

There is probably no fruit that offers greater return for land and labor invested than the strawberry. With a small amount of care and attention they do well in most any soil. With extra care and cultivation one is usually rewarded with very large crops of fruit. Strawberries do best in medium rich soil for the June bearing varieties while the ground should be made very rich for everbearing varieties.

Plants should be set in well prepared ground with the crown just at the surface. Firm the soil well around the plant so as to retain moisture until the roots are well established. The strawberry root is not very long and most of the failures are caused by the drying out of the roots after planting, before the plant starts to grow.

On account of the extremely dry weather last August and September, strawberry plants did not set in such numbers as they would, had the season been normal, however, the plants which did set had more room to develop with the result that the plants that I have to offer, this spring, are well rooted and of superior quality.

Many years of experience, as a berry grower, has convinced me that plants propagated for transplanting should excel in root vitality. My strawberry plants are sturdy, pure bred, one year old. They have been mulched all winter to insure abundant vitality to withstand transplanting.

Each order is dug and packed separately and shipped the same day. I do not dig large quantities of plants and then fill orders from a stock room.

Plants are tied twenty-five in a bundle.

I grow and offer for sale only varieties that have proven the best to grow in Minnesota and surrounding states.

All the varieties which I grow, with the exception of Easypicker, are perfect flowered and any one variety will produce fruit when planted alone, which is not the case with pistillate or imperfect flowering varieties.

Every garden should have a strawberry bed large enough to supply the family with ripe strawberries, from the middle of June until October, besides enough for canning purposes. Do not fail to get some of my plants this year.
Everbearing

PROGRESSIVE—Staminate: Very productive. Fruit medium size and of excellent quality. Produces fruit from about a week earlier than any June variety until late fall. After trying out many varieties of everbearing strawberries I have come to the conclusion that Progressive is the safest and most profitable variety to grow in our northern climate. 75c for 25, $1.25 for 50, $2.00 per 100. Postage paid. $15.00 per 1,000 f. o. b. St. Paul.

June Bearing Varieties

PREMIER—Staminate: I am pleased to offer a strawberry that I can recommend to be an improvement over all other early varieties. This variety was introduced by R. M. Kellogg, and has proven to be just what we were looking for in an early fruiting variety. Plants grow large and are wonderfully productive. The berries are large and of a beautiful glossy red color. I have never found so many good qualities in an early berry. 25 plants 50c, 50 plants $1.00, 100 plants $1.75, $10.00 per 1,000.

MINNEHAHA—Staminate: While this is one of the newer productions, it has been tried out enough to be placed among the best varieties. Fruit is very large, season of ripening late. Plants very hardy. I consider this our best late variety. 25 plants 50c, 50 plants $1.00, 100 plants $1.75, $9.00 per 1,000.

EASYPICKER—Pistillate: A new production of the Minnesota State Fruit Breeding Farm. Very vigorous, good plant maker, wonderfully productive, berries medium in size with excellent quality. As the name implies they are easily picked. This new berry promises to be a leader among the better varieties. I have only a limited supply to offer. 50c per dozen, 75c per 25, $1.25 per 50, $2.00 per 100, $9.00 per 1,000.

COOPER—Staminate: This new strawberry was introduced by Henry Emlong & Sons, Michigan, and has become very popular wherever grown. Size, productiveness, long season in fruit, and last but not least, quality in fruit, makes Cooper a valuable variety. Season begins with the mid-season and continues to fruit until most late sorts are gone. Plants healthy and vigorous. 75c per 25, $1.25 per 50, $2.00 per 100, $9.00 per 1,000.

SENATOR DUNLAP—Staminate: The Senator Dunlap is too well known to require a description. It is still a very popular strawberry. 25 plants 50c, 50 plants 75c, 100 plants $1.00, $7.00 per 1,000.

NOKOMIS—Staminate: A new production of the State Fruit Breeding Farm which promises to become popular as a late home garden strawberry. Very productive, fruit large and
good in quality. 75c per 25, $1.25 per 50, $2.00 per 100, $9.00 per 1,000.

**RED RASPBERRIES**

**REDPATH**—Now officially known as Latham. This wonderful raspberry is so well known that it is unnecessary for me to say much about it. I received my original stock from Thomas Redpath and have taken pains to keep it pure ever since. I do not think that there is any red raspberry equal to this variety. $1.00 for 25, $1.75 for 50, $3.00 for 100, $20.00 for 1,000.

**REDPATH AND LATHAM** (Mosaic free)—Nearly all raspberry plantings have a disease which is called “MOSAIC.” In the past this was not known as a disease but varieties were said to run out and new varieties were sought to take their place. A few years ago plant disease experts decided that, what we thought was running out of varieties, was really a disease which gradually weakened the plants of a variety. By careful selection of healthy plants, mosaic free stock has been secured. These plants have been inspected several times during the past season by the State Nursery Inspector and pronounced free from the mosaic disease. I have only a limited supply of these plants to offer. No. 1 plants 10 for $1.50, 25 for $3.25, 50 for $6.00, 100 for $10.00, No. 2 which are smaller are 10 for $1.00, 25 for $2.00, 50 for $3.50, 100 for $6.00.

**CURRANTS**

For the past twenty-five years I have raised currants for the St. Paul and Minneapolis markets and have discarded those varieties which proved unprofitable either by being poor yielders or poor in quality. I can recommend the following varieties which I offer.

My plants are all two-year-old No. 1.

**LONDON MARKET**—This has been my main crop variety for years, as it is a heavy bearer and the fruit is good in quality although only medium in size. The bush is vigorous and upright in growth. While my price is lower for plants of this variety I can recommend it as the best for the main crop. 25c each, $2.50 per dozen, $15.00 per 100.

**PERFECTION**—On account of the very large fruit which is of a high quality this variety has become popular. Season is early. The fruit is large enough to be in the cherry class. My price is unusually low for this variety. 30c each, $2.75 per dozen, $18.00 per 100.

**POMONA**—A very desirable variety. Season is early. Fruit is good in quality and somewhat larger than London market but does not yield so good. Bushes upright in growth. 30c each, $3.00 per dozen, $20.00 per 100.
WILDER—A standard variety, midseason, fruit above medium in size, quality good. 30c each, $3.00 per dozen, $20.00 per 100.

PRINCE ALBERT—The fruit of this variety is light red in color, above medium in size but not very good in quality. It does not come into bearing for three years after planting while most of the other varieties bear fruit the year after planting. Bunches very large, bush very heavy and an upright grower. This variety is valuable on account of the late season of ripening for then is when prices are highest. 30c each, $3.00 per dozen, $20.00 per 100.

CHERRY CURRANT—The fruit is good in quality and very large, season is early. The only fault with this variety is the bush is rather weak and not upright in growth. 30c each, $3.00 per dozen, $20.00 per 100.

DIPLOMA—Another large fruit variety but with the same fault of sprawling, weak bushes. 30c each, $3.00 per dozen, $20.00 per 100.

RED CROSS—A currant that compares fairly well with London Market and considered, by many, as good for the main crop. 30c each, $3.00 per dozen, $20.00 per 100.

WHITE GRAPE—A good yielding white variety which is noted for the high quality of the fruit. 30c each, $3.00 per dozen, $20.00 per 100.

BLACK CHAMPION—A black currant which yields as well as many red varieties. 30c each, $3.00 per dozen, $20.00 per 100.

GOOSEBERRIES

Como—For years we have been looking for a better gooseberry which would be hardy and not susceptible to the diseases common to the English varieties. This we have in the Como. This new variety was originated at the Minnesota State Fruit Breeding Farm. A vigorous grower, very productive, nearly thornless, perfectly hardy and is not susceptible to gooseberry diseases. Fruit is larger than the fruit of the Carrie but, unlike this variety, does not turn dark color when ripe. The ripe fruit is as green in color as it is before ripening. This feature is a great advantage, for gooseberries sell much better when green than when they have become dark in color. 30c each, $3.00 per dozen.

The Carrie—This variety has become so well known that I do not need to mention its many good qualities, but I will say that it is nearly thornless, is practically disease resisting, and a heavy bearer. 25c each, $2.50 per dozen, $20.00 per 100.
GRAPES

This fruit has become very popular in the past few years. I sold my grapes last year for $5.00 per bushel, which means that the crop sold at the rate of $1,000 per acre. Grapes come into bearing the year after setting and they do not require much care and do well on rough land as well as on level land.

BETA—I would advise this variety above all others for Minnesota and the Northwestern States. The vines are as hardy as the wild grape, which means they do not require protection in the winter as many of the other varieties do. Fruit is the color of the Concord and of the best of quality to use for jelly or juice as it has some of the wild grape flavor. Fruit is nearly as large as the Concord and a much better yielder. Ripens the first part of September. I propagate my plants from wood taken from my bearing vineyard, thus assuring plants that will be good yielders. I propagate these grapes in quantities which permits me to offer them at the following low prices: Strong two-year-old plants 20c each, $1.75 for 10, $15.00 per 100.

CONCORD—A well known variety of purple grape which is semi-hardy in this climate. 20c each, $1.75 for 10, $15.00 per 100.

WHITE NIAGARIA—A large variety of white grape which is semi-hardy in Minnesota. 20c each, $1.75 for 10, $15.00 per 100.

APPLE AND CRAB APPLE TREES, STANDARD VARIETIES

These trees are three years old and are 5 to 7 feet in height and well branched. I have never grown a better lot of apple trees. Growing in my nursery at Newport, they are perfectly hardy and acclimated which is very important in selecting fruit trees. My prices are very low considering the high grade of the stock. Price 60c each, 50c each in lots of 10 or more of any one variety.

WEALTHY—This is now considered the best apple of its season both for home use and in a commercial orchard. The tree is an upright grower and hardy. The fruit is medium to large in size and colors up to a beautiful red, quality exceptionally good, will keep until January.

DUCHESS—Season, July and August. A vigorous growing hardy tree. This variety is a heavy bearer. Fruit is large, greenish yellow striped with red. This is the standard early apple for the Northwest.

NORTHWESTERN GREENING—A late winter apple. The tree is a vigorous grower and fairly hardy. The fruit is very large; yellowish green when ripe; a good pie and baking apple.
PATTEN’S GREENING—This apple is popular on account of its hardiness and yielding qualities. Fruit large, green with a pink blush, tree is thrifty and grows in a spreading form.

OKABENA—A good early apple ripening just after the Duchess. Fruit looks like the Duchess but somewhat smaller.

SWEET RUSSET—Somewhat larger than the crab varieties. A very heavy yielder. Fruit is sweet and tastes very much like pear. A good apple for canning.

WHITNEY—This is a hybrid but is usually considered in the crab class. Trees thrifty and upright in growth, abundant yielder, ripens in August, fruit very delicious.

TRANSCENDENT CRAB—A well known variety of hardy crab. The fruit of this variety is valuable for pickling and jelly. Has become unpopular on account of its tendency to blight.

VIRGINIA CRAB—Tree very hardy and a vigorous grower, does not blight like Transcendent, fruit fully as good as Transcendent for pickling or jelly. An abundant annual bearer.

FLORENCE CRAB—Tree hardy but not so vigorous a grower as the Virginia. Fruit is suitable for canning, pickling and jelly.

APPLES, NEW VARIETIES

HARALSON—This new variety which was originated at the Minnesota State Fruit Breeding Farm a few years ago fills a long-felt want among apple growers of Minnesota. The fruit is about the same size and color as Wealthy but later in season of ripening; a real winter keeper. Unlike the Wealthy the fruit hangs to the tree until picked. The tree is very symmetrical and perfectly hardy in Minnesota.

I have a fine stock of this wonderful apple which I offer at the very low prices as follows: 2 to 4 feet unbranched 50c each, 3 to 4 feet well branched $1.00 each, 4 to 6 feet $1.50 each, $1.00 each in lots of 10 or more.

ERICKSON—This new apple was originated at Aitkin, Minn., a few years ago and is proving to be a real success as an early apple. The fruit, which ripens about the same time as the Duchess, is very large and a deep red in color. The quality and flavor cannot be surpassed in an apple of this season. The tree is as “hardy as an oak” and has the type of growth of the HibernaL We have always wanted a big, red, early apple, with good quality. Now we have it in the Erickson. Price, 3 to 4 feet, $1.00 each.
PEAR

Up to the present time the growing of pears in the Northwest has been considered out of the question, but the Minnesota State Fruit Breeding Farm has again come to the rescue and has produced a real good pear described below.

MINN. NO. 1—Tree a vigorous, upright grower, perfectly hardy, blight resisting. Fruit large, good quality, a heavy producer. What more could you want? My trees are budded on Pyrus Ussuriensis, which is a hardy Japanese pear seedling which will stand this climate. I secure these seedlings for this purpose at a high cost for they have proven the best as common pear seedlings will winter-kill. Price, No. 1 grade $1.50 each, No. 2 grade $1.00 each.

PLUMS

We have felt the need of a better plum for the Northwest, and have been watching, with interest, the development of the new varieties originated at the Minnesota State Fruit Breeding Farm. These plums are far superior to the older varieties which we have been growing, and I feel perfectly safe in recommending them. They are very fast growing and usually come into bearing the second year after setting. The fruit of many of these new varieties is as large as a hen’s egg, and is superior in quality to the plums which are shipped into our markets. They are perfectly hardy in our climate. I have selected and propagated the following varieties which have shown exceptional qualities.

While a large percentage of the following varieties are well branched there is a small number of each variety which are unbranched. These unbranched trees are as thrifty as those that are branched and, although they are cheaper, they are preferred by many for planting for one can branch them more natural in the orchard than it is possible to do in the nursery row.

UNDERWOOD—A large fruited, vigorous growing, early maturing variety, especially promising on account of its size, red color, earliness and high quality. Price, 4 to 5 feet, well branched 60c each; 3 to 4 feet, well branched 50c each; unbranched 35c each.

TONKA—An extremely productive variety, producing large, round, red fruits of firm flesh and good quality. Unbranched 35c each.

RED WING—One of the largest fruited plums, ripens midseason, with beautiful red freestone fruits of high quality. 3 to 4 feet branched, 50c each; unbranched 35c each.

MONITOR—A late midseason variety, with a vigorous, well shaped tree, producing large, red, firm flesched fruits of good
quality. 4 to 5 feet branched 60c each, 3 to 4 feet branched 50c each, unbranched 35c each.

MOUND—A very large fruited variety, bearing heavy annual crops of firm fleshed fruits of good quality. 4 to 5 feet branched 60c each, 3 to 4 feet branched 50c each, unbranched 35c each.

ANOKA—A moderate sized, productive tree, bearing large dark red medium sized fruits, ripening the first of September. 4 to 5 feet branched 60c each, unbranched 35c each.

GOLDEN ROD—A vigorous variety bearing pure yellow fruits of firm flesh and good quality; promising as a market and home variety; season, late August. 4 to 5 feet branched 60c each, 3 to 4 feet branched 50c each, unbranched 35c each.

ELLIOTT—A strong growing variety producing large, highly colored red fruits of good quality, ripening the first week in September; one of the most promising of the late plums. 3 to 4 feet branched 50c each, unbranched 35c each.

WINONA—This variety is a vigorous grower, produces fruits of highest quality, yellow with a red blush. 4 to 5 feet branched 60c each, 3 to 4 feet branched 50c each, unbranched 35c each.

LA CRESCENT—An extremely vigorous tree, bearing pure yellow fruit of highest quality and delicate texture; most promising as an early home variety, but too tender for shipping. 4 to 5 feet branched 60c each, 3 to 4 feet branched 50c each, unbranched 35c each.

WACONIA—A medium to large fruited variety, with heartshaped fruits, ripening late midseason; productive and good quality. 4 to 5 feet branched 60c each, 3 to 4 feet branched 50c each, unbranched 35c each.

**CHERRY-PLUMS**

We have some varieties of cherries that do fairly well in our Minnesota climate, but where one has but a few trees the birds generally get the bulk of the fruit before it can be picked. The hybrid plum-cherry which is a cross between a plum and cherry has the flavor of the cherry and is hardy like the native plum and the birds do not bother them. They are heavy yielders and are excellent for canning.

Both of the following varieties are dwarf in their habit of growth which accounts for the size of the smaller nursery tree. While either variety will bear fruit alone the cross pollinization is more complete if the two varieties are planted near together.
ZUMBRA—A hybrid containing the blood of the sweet cherry, wild pin cherry and sand cherry. It is a dwarf tree of the type of Sapa or Opata, a very productive bearer. Quality is good, but should be thoroughly ripened before picking. Late midseason. 2 to 3 feet partly branched 60c each, 50c each in lots of 10 or more.

NICOLLETT—One of the latest productions of the Minnesota State Fruit Breeding Farm. The fruit almost a true cherry. When canned one cannot detect the difference from canned cherries. 2 to 3 feet $1.00 each.

COMPASS—An older variety that has given excellent satisfaction. These cherry-plums are all of a dwarf nature, so the nursery trees will be smaller in size than the plum trees. Price, No. 1 trees 75c each, $8.00 per dozen.

RHUBARB OR PIE PLANT

MAMMOTH VICTORIA—This variety is larger and of better quality than any of the old varieties. Divided roots 20c each, $1.25 per 10. For larger quantities I will quote prices on application.

CLIMBING VINES

ENGELMAN'S IVY—There is no better vine where one wishes a clinging vine. This ivy grows very fast and clings to any surface such as brick or stucco. It is very hardy. 35c each.

HARDY GRAPES—For an arbor vine I would recommend Beta grape, as it is a fast grower, does not winter-kill and, at the same time, produces quantities of fruit. (See grapes for prices).

ORNAMENTAL HEDGE PLANTS

An ornamental hedge frames the lawn and gives it a background. One must judge by the lawn and surroundings what kind of a hedge to plant. Following are varieties for every lawn.

COTONEASTER—Where a hedge of medium height is wanted this is the best to plant. The leaves are a rich green and very glossy which adds to the beauty of the plant. 12 to 18 inch plants 20c each, $15.00 per 100.

BUCKTHORN—Probably the best hedge plant where a rather high hedge or screen is wanted. This plant is very hardy, a vigorous grower, stands pruning exceptionally well. 3 to 4 foot plants heavily branched 25c each, $20.00 per 100; 2 to 3 foot plants 20c each, $15.00 per 100.

BARBEBERRY THUNBERGH—This low growing plant is best adapted for a hedge used as a border where the view of other objects is not to be obscured. They are a spreading plant with beautiful foliage that turns a scarlet in the latter
part of the season. Used also as individual specimens and as border plants in groupings. Medium size plants, about 12 to 15 inches 20c each, $15.00 per 100; 15 to 24 inches 25c each, $20.00 per 100.

ARBOR VITAE—A variety of white cedar adapted for hedge or windbreak. Stands pruning and close planting. One of the best evergreen hedge plants. (For prices see evergreens).

RED CEDAR—Also a good hedge plant. Stands pruning well, and perfectly hardy. Does best on sandy soil. (See evergreens for prices).

ORNAMENTAL SHRUBS

Ornamental shrubs are becoming more and more popular as people appreciate their permanent value and beauty. They lend a charm and grace to the home grounds that is invaluable. One can have a continuous succession of bloom from early in April to the days when frost again nips the flowers of the very latest to bloom.

Shrubs should be grouped with several of one variety near together in groups of different varieties. Several such groupings make an excellent border or foundation planting.

DOUBLE FLOWERING PLUM—An ornamental shrub belonging to the plum family. Dwarf in habit and produces masses of double pink flowers in early summer. This plant is very much like the pink, double flowering almond but is much hardier and a better plant for our climate. Price, 75c each.

MANITOU—An early spring-flowering tree or shrub, dwarf to medium size, producing great masses of bloom but no fruit. A hardy cross between Siberian almond and peach. A new product of the Minnesota State Fruit Breeding Farm. 60c each.

PURPLE LEAF PLUM, NEWPORT—A product of the Minnesota State Farm. A beautiful dark purple-leaved variety of plum carrying its rich color throughout the season; fruits below medium in size, and of little value. This is valuable in group planting where varied coloring is desirable. Price, 75c each.

SNOWBERRY—A valuable plant in group planting. Conspicuous on account of the white berries which stay on for a long time. Price, 50c, 3 for $1.00.

LILAC, PURPLE—Too well known to describe. 35c each.

LILAC, WHITE—50c each.

SPIREA (Anthony Waterer)—A very desirable plant for border. Produces an abundance of purple flowers for a long period the latter part of the summer. 40c each.
SPIREA VAN HOUTTI (Bridal Wreath)—Very desirable on account of its beautiful foliage and graceful habit of growth as well as the masses of white flowers which come in June. Large plants 50c each, medium size plants 35c each.

SPIREA FROBELLI—Very much like Anthony Waterer but grows larger and is hardier in this climate. 40c each.

SPIREA BILLARDI—Tall, erect shrub with canes terminated by feathery plumes 5 to 8 inches long, of a dainty pink color. 40c each.

TARTARIAN PINK HONEYSUCKLE—Well known as an ornamental for either group planting or as an individual specimen. 50c each.

SNOWBALL—Also a well known shrub for individual specimen planting. 50c each.

MOCK ORANGE—A well known variety of syringa. 50c each.

LE MOINES SYRINGA—Like the Mock Orange but dwarf in size. 50c each.

HIGH BUSH CRANBERRY—Well known as an ornamental for group planting. 50c each.

HYDRANGEA P. G.—Every home should have some of these in their yard. Bloom in late summer. Flowers are white at first and then turn to a pink and later to purple. Large plants 75c each. Medium size plants 50c each.

GOLDEN ELDER—A shrub of medium height with yellow foliage, which is valuable for group planting in giving variety in color. 3 to 4 feet 60c each.

CUT-LEAF ELDER—A shrub of about the same habits of growth as the common Elder, with green foliage which is very deeply cut, and adds a finer appearance to a group of shrubs. 3 to 4 feet 60c each.

EVERGREENS

In the bleak winter months when the ground is covered with snow and the trees have lost their leaves the evergreen gives a note of comforting color to remind one that spring shall come again.

In comparing my price with those of other nurserymen, remember that height alone cannot by any means establish values. An Evergreen tree grown close and crowded in the row may be the same height as one of my Evergreens, but will not be as heavy, symmetrical or have as good roots.

Constant transplanting and root pruning give my Evergreens masses of fine, fibrous feeding roots which has been
the main reason for the success that my customers have had in making Evergreens, bought from me, grow.

The soil that I grow Evergreens in is just the right texture for balling the roots. When I ball and burlap an Evergreen the roots are never disturbed but the soil goes with the tree.

I consider that all evergreens 18 inches or over should be balled and burlapped which I do free of charge. Balled and burlapped evergreens are expensive to pack so the following prices do not include packing as in other nursery stock. I will crate evergreens at cost.

COLORADO BLUE SPRUCE—This is the most popular evergreen for specimen planting. Color of foliage ranges from a green to a silvery blue. My trees have been transplanted often and have plenty of room to develop a symmetrical shape so desirable for lawn planting. Price of selected blue which are often called shiners. 1½ to 2 feet $5.00 each, 2 to 3 feet $6.50 each, 3 to 4 feet $9.00 each, 4 to 5 feet $12.00 each, 5 to 6 feet $15.00 each.

Price of Colorado: Green in color but as good in every other way as the above. 1½ to 2 feet $2.00 each, 2 to 3 feet $3.50 each, 3 to 4 feet $4.50 each, 4 to 5 feet $5.50 each, 5 to 6 feet $7.00 each.
BLACK HILL SPRUCE—Next to the Colorado these trees are the most popular of the evergreens. They are noted for their deep green color and symmetrical habit of growing. Price, 1½ to 2 feet $2.00 each, 2 to 3 feet $3.50 each, 3 to 4 feet $4.50 each, 4 to 5 feet $5.50 each, 5 to 6 feet $7.00 each.

RED CEDAR—A very hardy tree which does well on sandy or stony ground. All of the cedars stand pruning and make good hedges or windbreaks. 6 to 8 inches high 20c each, 8 to 10 inches 25c each.

PYRAMIDAL CEDAR—This tree belongs to the same family of cedars as the red cedar but the foliage is much more dense and the tree is pyramidal in form. This tree can be used to good advantage in ornamental plantings. 4 to 6 feet $5.00 each.

GLOBE CEDAR—A beautiful globe-shaped cedar with very dense foliage used in ornamental plantings. 2 to 3 feet $5.00 each.

PYRAMIDAL SILVER CEDAR—In habits of growth and density of foliage this tree is like the pyramidal cedar but the foliage is a silvery blue in color. 12 to 15 inches high $1.00 each.

ARBOR VITAE—A popular evergreen for hedges or windbreaks which is also often used for single specimen planting. 10 to 15 inches 40c each, $25.00 per 100; 1½ to 2 feet $1.00 each, $75.00 per 100; 2 to 3 feet $1.25 each, 3 to 4 feet $1.75 each.

PYRAMIDAL ARBOR VITAE—A beautiful variety of Arbor Vitae which grows in pyramidal form and is used as individual specimen trees. 2 to 3 feet $4.00 each, 3 to 4 feet $5.00 each.

GLOBE ARBOR VITAE—A globe-shaped Arbor Vitae which does not require pruning to retain its shape. This variety is slow growing and can be used to advantage planted on either side of the entrance to a dwelling. They may be also planted in large pots. 1½ to 2 feet $5.00 each.

PONDOROSA PINE—This is a fast growing, coarse needle tree which can be used to good advantage on large lawns or for windbreaks. 2 to 3 feet $1.00 each.

WHITE PINE—A beautiful tree that grows to a great height. May be used in large lawn plantings or as windbreaks. 2 to 3 feet $1.00 each.

WHITE SPRUCE SEEDLINGS—White spruce is used a great deal for windbreaks. 5 to 8 inches $10.00 per 100.
SHADE TREES

WHITE ELM—A magnificent tree growing 60 to 80 feet high with drooping spreading branches; one of the grandest of our native trees; makes a beautiful lawn or street tree. The following prices are for well-shaped specimen trees. The measurement in inches means the diameter of the tree just above the ground. 1½ to 2 inches $4.00 each, 2 to 2½ inches $5.00 each, 2½ to 3 inches $6.00 each, 3 to 4 inches $8.00 each, 4 to 5 inches $12.00 each, 5 to 6 inches $20.00 each. For elms suitable for windbreaks I will be glad to quote special prices on application.

LOMBARDY POPLAR—A slender tree which grows to a great height; used to good effect in some landscape plans. 5 to 6 feet 50c each.

SIMONS POPLAR—Grows tall and slender like Lombary and is a longer life tree. 2 to 3 feet 25c each.

CUT LEAF WEEPING BIRCH—An elegant, erect tree with slender drooping branches and fine cut leaves. The bark is white like the ordinary native birch. There is no tree that will take the place of this for individual planting on the lawn. 3 to 4 feet $2.00 each, 6 to 8 feet $4.00 each, 8 to 10 feet $5.00 each.

WHITE OR PAPER BIRCH—This native tree can be used in place of cut leaf birch but is not so good a tree. 3 to 4 feet 60c each. Will give prices on application for larger sizes.

MOUNTAIN ASH—A beautiful lawn tree which becomes very attractive the latter part of the summer when it is covered with masses of red berries. 6 to 8 feet $2.00 each.

HARDY PERENNIAL PLANTS

PEONIES—White, pink, divided roots, 30 each; red, 50c each.

IRIS—20c each, $1.25 for 10.

PERENNIAL PHLOX—25c each, $2.00 for 10.

BLEEDING HEART—A very desirable garden plant. It is impossible to hold these plants in a dormant condition, so we have adopted the method of potting these plants so they can be planted until late in the season. We do not ship these. Potted plants $1.00 each.
Certificates of Inspection

Inspection completed September 21, 1925.

MINNESOTA STATE DEPARTMENT OF AGRICULTURE
Office of State Entomologist

No. 1893 St. Paul, Minn., September 24, 1925

CERTIFICATE OF NURSERY INSPECTION

This is to certify that in accordance with Sec. 1, Chapter 206, Session Laws of 1913, the nursery stock and premises of The Bailey Nursery of Newport, Minn., J. V. Bailey, proprietor, have been carefully examined by a duly authorized inspector and found apparently free from dangerously injurious insects and contagious plant diseases.

This certificate is good until November 1st, 1926, unless revoked, and covers only stock actually on the premises when examined.

N. J. Holmberg, Commissioner.
A. G. Ruggles, State Entomologist.

My Guarantee and Terms

That all nursery stock herein quoted is grown under modern scientific methods.

That plants are securely and freshly put up in damp packing material.

That all nursery stock is true to name and correctly labeled.

That certificate of inspection accompanies each shipment of nursery stock.

In no case will I be liable for more than the original purchase price.

Prices quoted in this price list are f. o. b. St. Paul or at Nursery.

Deliveries will be made daily to the express office in St. Paul and to the St. Paul post office.

Cash with order when stock is to be shipped, or will accept one-fourth of purchase price in advance and ship goods C. O. D. for balance if preferable.
